## Summary

I am a very driven person with very clear goals in terms of my career as

well as my personal life. I believe in honesty above all else and making a valuable contribution towards society. In my opinion, one of the greatest injustices that can be done by man, is refusing to pass on what one has learnt and experienced, for without this happening there can be no progress. My dream is to be remembered for the feats that I had accomplished in my lifetime. I am extremely passionate about

technology, specifically software development, which is the reason why I chose to study Computer Science at a tertiary level. I am particularly fond of new challenges that test my abilities allowing for growth, self-improvement and the improvement of others. My family and friends are an extremely important factor in my life and I would see them proud of the man that I am, and want to be.

## Experience

### Barone, Budge & Dominick (Pty) Ltd

#### Bursar

BBD implements and maintains complex business systems. A customer with a requirement for custom software, which must fit into their business, and must meet the business goals approaches BBD with the goal in mind of obtaining a software solution thereof.

HOUGHTON ESTATE, JOHANNESBURG  
*Jan'15 – present*

### University of Pretoria, Computer Science Department

#### Teaching Assistant

As a teaching assistant for Data Structures and Algorithms, Netcentric Computer Systems and Software Modelling it is expected of one to have a good understanding of design patterns, general algorithm implementations and data structures in the Computer Science field as well as knowledge of web development and other networking related software development.

HATFIELD, PRETORIA  
*Jul'14 – present*

### Dynamic Visual Technologies

#### Junior Software Developer

DVT is a software development and related services business. They build, implement and support software, and provide those services that ensure business concepts are clear, that practical needs are met, and that software is written to specifications.

HYDE PARK, JOHANNESBURG  
*Nov '14 – Jan'15*

## Technical Skills

**Technical expertise:** Software design and implementation. Big fan of Agile methodologies. I regularly utilise Java/C++, yet flirt regularly with C#. Proper knowledge of web technologies: HTML+CSS, XML, REST, .NET and JavaScript (including WebGL). Elementary knowledge of Artificial Intelligence related methods, such as optimisation problems.

**Natural languages:** Afrikaans (*mother tongue*), English (*full professional proficiency*), French (*elementary proficiency*).

## Interests

**Non-exhaustive:** Online gaming, running, music, reading, travel, foreign cultures, most things French related, cooking, open source movements, software development.

## **Non - Technical Strengths**

**Social skills:** I believe myself to be a rather "likeable" person, meaning I am very seldom found to be antagonistic towards others. I am a people person. I enjoy meeting and spending time with new and interesting people.

**Professional skills:** In a professional working environment I strive to be a very punctual, concise and informed individual. My approach towards professionalism relies on the concepts of honesty, determination, perseverance and most of all proper communication.

---

## **Why CSIR Ironman Image Throw Thingy?**

**Because:** I am very interested in mobile development, particularly for Android devices. New and innovative project like this one really interest me, since I am an avid follower of new technological advancements. This is a very visual project, I enjoy developing things where the results are clearly visible and can be appreciated.

# 1 Project Execution

## 1.1 Ideas and Technologies

### 1.1.1 Technologies to be Used

After due consideration and taking into account the received requirements, the following technologies will possibly be used:

**In order to develop the back end of the system (API and Web Server):**

- ASP.NET MVC 5  
This will be used to develop the back-end of the system, using Microsoft's Visual Studio IDE.
- ASP.NET Web API  
This will form the back-bone of the API with which the rest system will interact (possibly hosted in the cloud).
- C#  
Will be used in conjunction with .NET development.

**For the mobile app:**

- Xamarin or Android Studio  
The decision has yet to be made on whether the C# Xamarin approach will be used or the traditional Java in Android Studio approach, to develop an Android application. One of these two will however reign supreme.
- Open Source Libraries Open Source Software such as GPSTracker by nickfox (github), can be used to track the phones location and this can then later be used to specify which screen the image should be cast to.

### 1.1.2 Implementation Ideas

In order to develop the back end of the system [API]:

- One could do hosting in the cloud with the Microsoft Azure hosting platform - As students we would have access to many Microsoft products by registering at [www.dreamspark.com](http://www.dreamspark.com)

The Repository Pattern as well as IoC (Inversion of Control) can be implemented. Another possible pattern that could be investigated is the Unit of Work pattern.

### 1.1.3 Project Extension Ideas

The following was considered as possible future extensions on the current project specifications:

- No
